ABSTRACT OF THE DISCLOSURE

A thermoplastic coating and binding agent containing a non-homogeneous mixture of, based on the total weight of A and B:

- 5-95 wt% of a thermoplastic acrylic plastic with a melting temperature above room temperature, but below 200°C, a glass transition temperature below 120°C, and a melt viscosity of 1,000 to 1,000,000 Pa·sec at the melting temperature; and
- 95-5 wt.% of a flow improver, which, at room 10 temperature, is not compatible with the thermoplastic acrylic plastic, has a melting temperature above room temperature but below 200°C, a molecular weight under 20,000 d, and a melt viscosity below 100 Pa·sec at the melting temperature of the acrylic plastic. 15
